

Managing the Hazards of Aircraft Icing during Take-off, Cruise & Landing - Series Update

Aircraft Icing is no joke; it can kill you. Aircraft Icing during flight can be catastrophic. It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and propeller's thrust thereby reducing the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag. Come and get a refresher update before the icing season begins. Don't miss this exclusive opportunity. Click on the link below and register TODAY.

Directions: See Map Link. Call (610) 595-1500x240 if weather is inclement for possible cancellation notice.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
